This product does not contain restricted animal material. It should be fed only to calves. (For animal treatment only).

This product is best stored under cool and dry conditions and used within 6 months of production date.

Feeding Instructions

Calf Pellets should be offered ad-lib with fresh clean straw as a roughage source.

It is important to ensure good quality, clean water is always available and that troughs are cleaned daily.

Early Lactation

From day one to 42 days we recommend you should use a reputable milk replacer in conjunction with Kettridges calf pellets. Introduce the calf pellets ad-lib with hay, straw or clean water (all milk replacers should be fed according to manufacturer's instructions). After 6 weeks if the calves are forward then discontinue using the milk replacer and continue to feed Kettridges calf pellets for another 6 weeks or until calves are 120kgs plus.

Kettridges operates a Quality Management System Feedsafe accreditation No 45
