

Facts at a glance...

**We are currently buying grain,
call us now to discuss.**

PRODUCTION MIX

- Recommended delivery method is 'trail fed'
- Energy measurement is 12me
- 30% protein
- More cost effective than feeding just lupins
- Weed free
- No risk of importing resistance onto your farm
- Only buy what you need
- Consistency of supply
- Has complete daily mineral and trace element requirements

Note: product must only be fed on dry feed with adequate roughage available

PRODUCTION MIX

AN INNOVATION IN STOCK FEED • COST EFFECTIVE • WEED FREE • PLENTIFUL SUPPLY

An innovative stock feed

to help your sheep thrive.

At last, a cost effective,

weed free feed for ewes

and lambs.

Kettridges Production Mix

helps to put the spring

into your sheep before,

during and after lambing

season.

GENUINE NEED LEADS TO NEW FEED

Kettridges have always been proud to lend a hand on the land.

So, when the request came to us to develop an innovative new stock feed for ewes and their lambs, we were more than happy to take up the challenge.

Our new Production Mix was developed as a result of farmers asking us to design a new supplementary feed that was weed free, cost effective and could have consistency of supply.

Lupins on their own can be expensive and trying to find lupins clean from grass and weeds is a problem.

Just as important, our new Production Mix had to deliver a high, well balanced ratio of the right nutrients.

In terms of cost effectiveness this is where our new Production Mix comes into its own.

It has more nutrients with minerals and trace elements than just lupins, so in a nutshell, you need to offer less feed for better conditioning results.

IT'S ALREADY OUT THERE WORKING

Our new Production Mix is already getting some outstanding results. Here's what a couple of our local farmers had to say;

"After noticing that the ewes were starting to lose condition after lambing, I spoke to Kettridges to look at options to supplement feed, I was already getting lamb pellets from them so thought they'd have some ideas. Finding weed-free lupins can be difficult and time consuming so I decided to give their Production Mix a try, and I've got to say, I'm glad I did.

It only took the ewes with 6 week old lambs at foot a couple of feeds to get use to the pellets. There was a noticeable increase in the energy levels of both the ewes and lambs. The ewes maintained condition and the lambs gained weight. It may be a bit more expensive than straight lupins but because of the higher nutrients in Production Mix the quantity needed was reduced so worked out more cost effective in the long run.

As I said, I'm pretty happy with the results and have already placed my order for Kettridges Production Mix for the next lambing season."

Andrew Askew – Sheep Farmer, Boyup Brook

"We decided to try Kettridges Production Mix this year since lupins were pretty difficult to come by. Trying to find clean lupins can be a problem and the risk in bringing in weed and grass was not something we wanted to deal with. Therefore, we needed an alternative.

We found out that Kettridges had a new product available that combined lupins and canola which meant we were getting the lupins wanted and some canola thrown in. Kettridges recommended using Production Mix with other grains to give the stock the fibre they need. Since we've been using barley for a while we added that to mix, it was a good decision. The sheep took to the new mix quickly, and in general they were more active, which is always a good result.

Using Kettridges Production Mix this season was a good move. Any initial cost increases have been reduced through blending the product and good availability which is important, so we'll be continuing to use it."

Rex, Bruce & Trevor Smith – Sheep Farmers, Darkan
